Corporate Profile

About Us

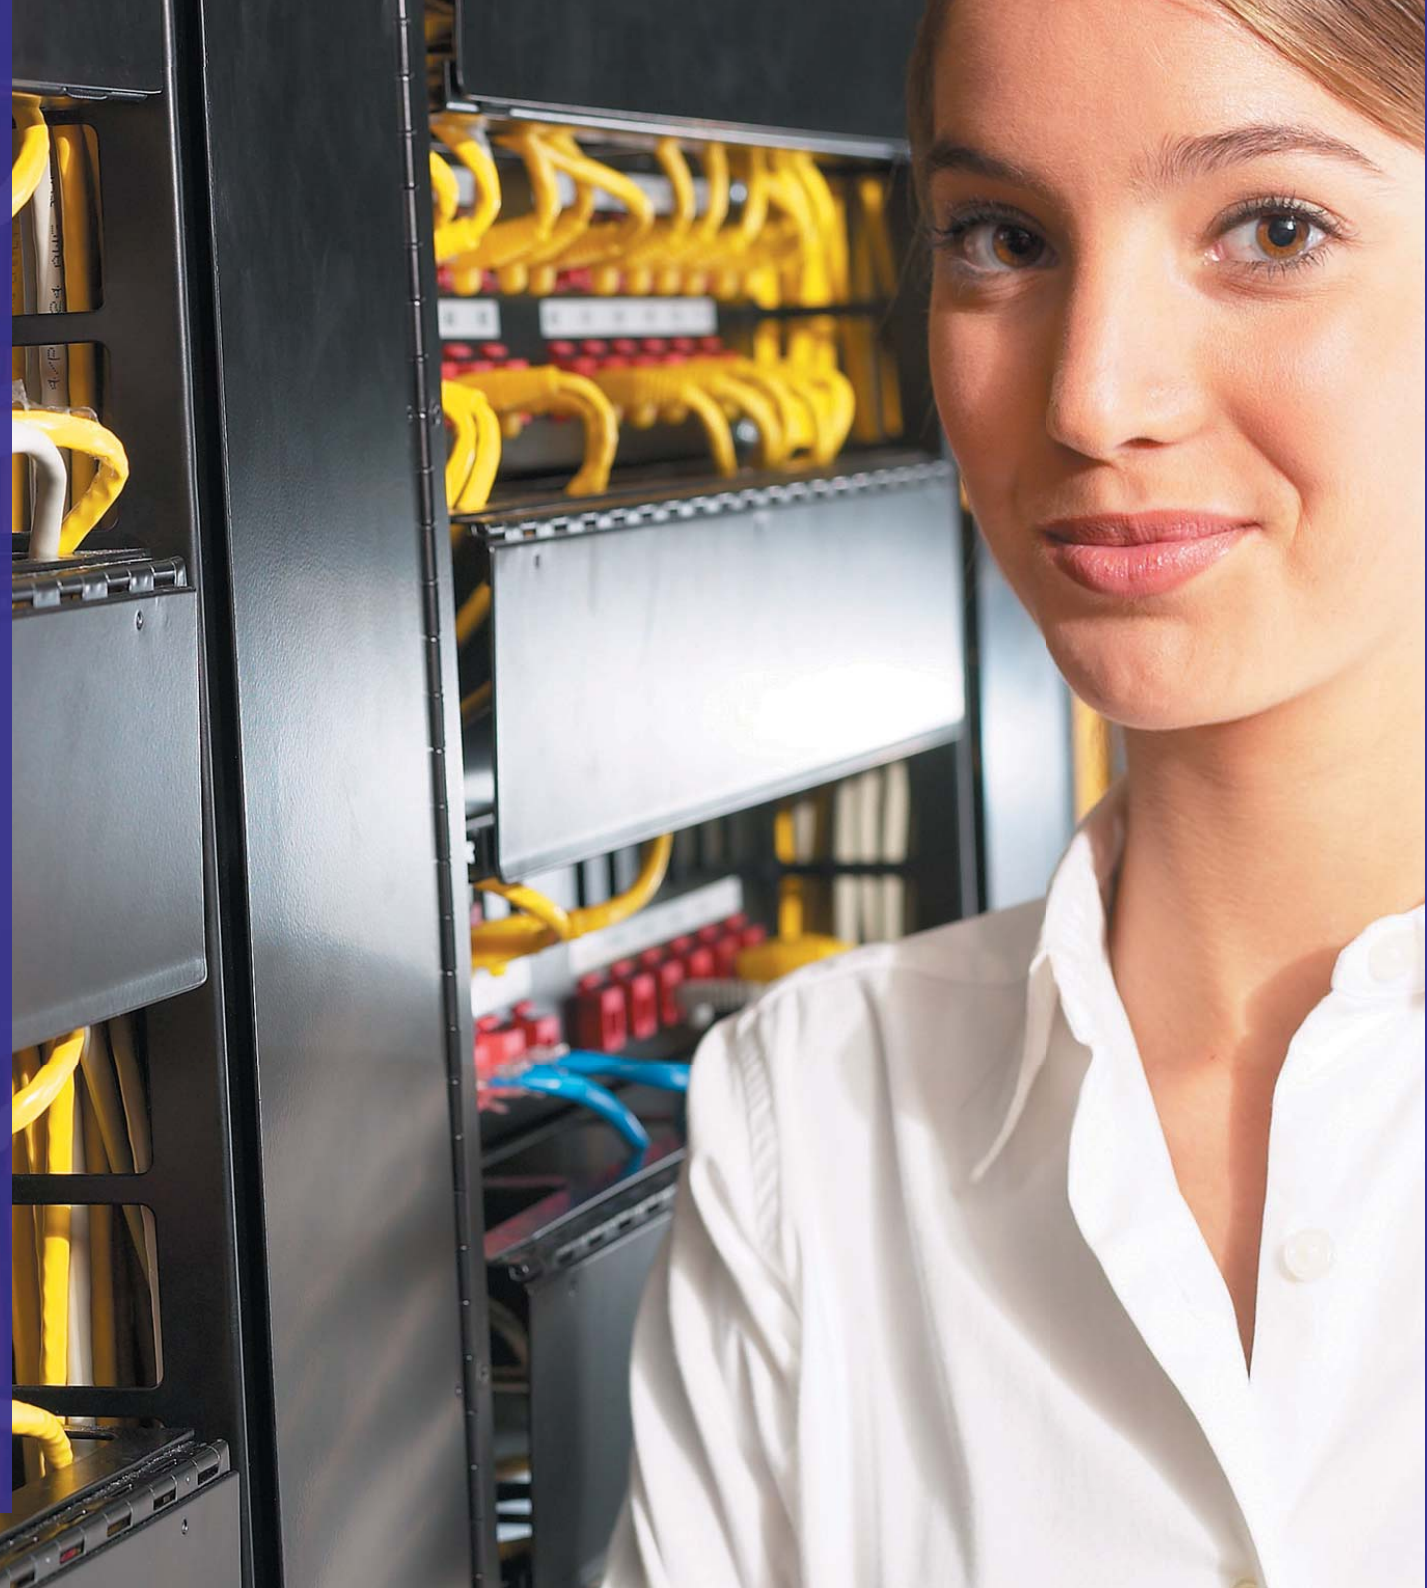

Based in Guildford, ICS is a vendor independent company who specialise in innovative infrastructure service solutions, consultancy and project management. We pride ourselves on our unrivalled experience in the market place, specialising in the design and implementation of best of breed products and service solutions.

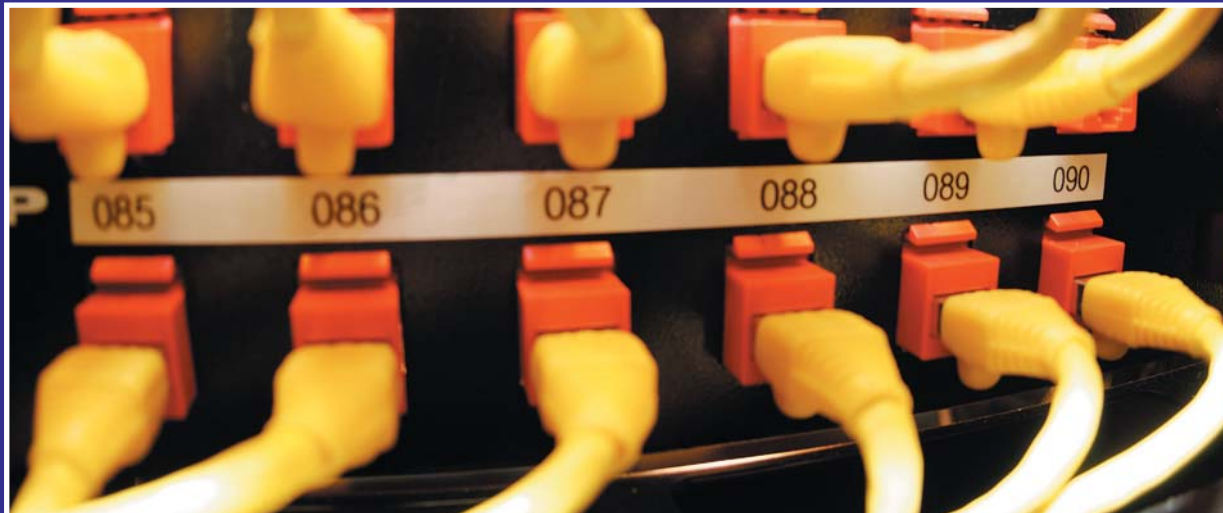

Fundamental to our solution(s) is the delivery of the highest degree of resilience and redundancy when involved in the design of any part of the environment. We are committed to a "right first time" approach, achieved by building lasting relationships, gaining awareness / understanding of the business and clarifying their individual, critical business and service needs. We select the best IT and service solutions to match the actual business requirements and not technology for technology's sake.

Our company focus is on delivering services and solutions for our clients with the sole intention of maximising their business advantage. These solutions may well encompass a single or wide range of service or information technologies solutions which will be based totally on the actual client business and therefore IT solution.

ICS is a company committed to quality in all aspects of its operation. Senior management and employees are dedicated to maintaining and continuously improving the company's quality of service to all its customers. We fully understand the need for service solutions to evolve through the life of a contract so that we can continue to maximise value to you and your users. In contrast to many organisations we act as an agent for change, working closely with you to refresh services and to assist in driving improved return from communications assets or identifying where key strategic investments may be appropriate.

ICS has an extensive track record procuring and implementing technology solutions in many arenas such as Blue Chip companies, financial trading rooms, new office builds and existing infrastructure add ons. As such we are uniquely positioned to develop the best solutions with the available technologies and furniture –these will be the latest state-of-the-art, and may equally be more established products where appropriate.

Structured Cabling

ICS cabling division specialises in the design, implementation and support of integrated and structured cabling solutions. ICS Ltd are a quality driven company (BICSI Members) offering the highest standard of support possible through technical expertise and system warranty's to protect your investment.

Continuous consultation with you as our client with effective planning and scheduling ensures minimum business disruption throughout the installation process. In order to guarantee the highest level of quality and service, our policy of employing and training only direct labour is unparalleled in the industry.

Our Account and Project Managers are supported by disciplined and skilled engineers who are dedicated to manage and maintain client's infrastructure releasing valuable technical resources back into your business.

Environmental

ICS are accredited suppliers and installers of the NetBotz Environmental Monitoring System. NetBotz is the first environmental monitoring equipment in the UK that has been designed specifically to provide early warning of conditions that lead to equipment failure. NetBotz environmental monitoring appliances are simple, low-cost and require no additional resource development.

NetBotz is the first environmental monitoring equipment in the UK that has been designed specifically to provide early warning of conditions that lead to equipment failure. NetBotz allows you to improve network reliability and availability while increasing the productivity of scarce IT resources that are tasked with maintaining these networks.

ICS also offer the market leading IP surveillance solution MOBOTIX, which is renowned worldwide for image quality, technical specification, ease of use and breadth of products. The MOBOTIX digital surveillance camera is world renowned for its image quality. This MOBOTIX camera is in great demand because of its technical specification and cost effectiveness when compared with traditional CCTV offerings.
